

Digital Decisions in Cyber Security

Call for Participation

Researcher – **Dr Andrew Dwyer**,
Durham
University, UK

Do you work with machine learning and cyber security?

Do you work in policy and are working to understand the implications of AI upon cyber security?

If so... this research seeks to understand how decisions are made in relation to machine learning in cyber security across both the application of defensive techniques and in developing offensive cyber capabilities. This project seeks to explore how the rapid adoption of such processes and techniques may be changing the operation and practice of those making decisions in cyber security through interviews and site visits with practitioners, policymakers, and other relevant stakeholders.
